

## **TSARA Application, French tools**

### **Type of Project Intervention**

#### **Summary**

TSARA project was developed by the CREAL of Aquitaine. It was intended to create an application to train general public with ASD spreading playfully the good practice recommendations.

The game consists of small scenarios representing various daily life situations (eg home, school , outings, etc ...). Players have the objective of finding among several proposals, how to help people with ASD in the situation described.

TSARA application is for relatives of people with ASD (family, friends or professionals) and available since April 2016.
